Art Unit: 3662

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-31, 44-48 and 50 are drawn to fiber optic transmission system using distributed gain to compensate for losses caused by, inter alia, the dispersion compensation system, classified in class 359, subclass 337.5.
  - II. Claims 32-43 and 49 are drawn to a fiber optic multi-band system which compensates for gain tilt by adding of certain bands and amplifying the bands, classified in class 359, subclass 337.1.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as compensation for dispersion correction caused power losses. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3662

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
